

Please Note:

The mV/V Calibration value provided with your load cell is a "nominal" value only. Load cells need to be calibrated with a display or digital or analog signal conditioners before use to get the exact value.

If you need such exact Force vs. Voltage (millivolt) table and chart with a mV/V rating with a 5V or 10V supplied DC power, please request such a Calibration from Loadstar Sensors either prior to or after receiving the load cell.

Calibration Charges for Loads Up to 10K:

\$150 – Tension Only

\$150 – Compression Only

\$300 – Universal

Calibration Charges for Loads Greater Than 10K:

\$400 - Tension Only

\$400 – Compression Only

\$600 - Universal
