

# Digital Scales

Smart scales along with routers and software constitute StockVUE, an IoT solution for autonomous inventory management. StockVUE provides a frictionless solution for keeping track of inventory remotely and is used for inventory control in retail, distribution, manufacturing, healthcare, and other industries.

StockVUE uses digital smart scales to keep track of inventory by weight. These rugged, industrial quality scales are made of die-cast aluminum and come with a base and platform in four different sizes: Mini, Small, Medium and Large. Each size smart scale comes in various capacities to enable parts of different sizes, weights and capacities to be measured and counted accurately. They can be used for weighing items as light as 1gm to heavier items weighing tens of pounds per piece.

The scales have been designed to handle standard bins such as those made by Akro-Mils, Uline and others and can be placed on any existing shelves or racks of any kind (wire mesh, metal, wood etc.)

These high accuracy smart scales are connected to our SC-1200 sensor routers via UART but can also operate in USB mode with our S2U Serial to USB Dongles. Once connected to the SC-1200 series routers, weight data can be uploaded to the cloud.
